

## Bulk Drug Substances Nominated for Use in Compounding Under Section 503B of the Federal Food, Drug, and Cosmetic Act

Three categories of bulk drug substances:

- [Category 1: Bulk Drug Substances Under Evaluation](#)
- [Category 2: Bulk Drug Substances that Raise Significant Safety Risks](#)
- [Category 3: Bulk Drug Substances Nominated Without Adequate Support](#)

### Updates to Categories of Substances Nominated for the 503B Bulk Drug Substances List<sup>1</sup>

- Add the following entry to category 2 due to serious safety concerns of mutagenicity, cytotoxicity, and possible carcinogenicity when quinacrine hydrochloride is used for intrauterine administration for non-surgical female sterilization: <sup>2,3</sup>
  - Quinacrine Hydrochloride for intrauterine administration
- Revision to category 1 for clarity:
  - Modify the entry for “Quinacrine Hydrochloride” to “Quinacrine Hydrochloride (except for intrauterine administration).”
- Revision to category 1 to correct a substance name error:
  - Correct the error in the substance name “DHEA (dehydroepiandrosterone)” to “DHEA (dehydroepiandrosterone).”

---

<sup>1</sup> For the purposes of the substance names in the categories, hydrated forms of the substance are included in the scope of the substance name.

<sup>2</sup> Quinacrine HCl was previously reviewed in 2016 as part of FDA’s consideration of this bulk drug substance for inclusion on the 503A Bulks List. As part of this review, the Division of Bone, Reproductive and Urologic Products (DBRUP), now the Division of Urology, Obstetrics and Gynecology (DUOG), evaluated the nomination of quinacrine for intrauterine administration for non-surgical female sterilization and recommended that quinacrine should not be included on the 503A Bulks List for this use. This recommendation was based on the lack of information on efficacy comparable to other available methods of female sterilization and serious safety concerns of mutagenicity, cytotoxicity and possible carcinogenicity in use of quinacrine for this indication and route of administration. See “FDA Briefing Document: Pharmacy Compounding Advisory Committee (PCAC) Meeting (March 8 and 9, 2016),” available at <https://www.regulations.gov/document/FDA-2018-N-3240-0285>.

- Cyclobenzaprine Hydrochloride\*\*
- Cyclosporine/Cyclosporine A\*\*
- Dapiprazole Hydrochloride\*\*
- Dapsone\*\*
- Desoximetasone\*\*
- Dexamethasone Acetate

---

<sup>4</sup> A condition of section 503B of the FD&C Act is that the compounded drug product is not essentially a copy of one or more approved drug products. For more information about the “essentially a copy” provision in section 503B, see FDA’s guidance for industry [“Compounded Drug Products That Are Essentially Copies of Approved Drug Products Under Section 503B of the Federal Food, Drug, and Cosmetic Act.”](#) In addition, FDA does not intend to take action against an outsourcing facility for failing to compound in accordance with section 503B(a)(5) if it fills orders for a compounded drug that is essentially a copy of an approved drug that has been discontinued and is no longer marketed. Bulk drug substances in Category 1 that are components of FDA-approved drugs are designated with two asterisks (\*\*\*) below.
